20 to 130 GPM

76 to 492 LPM

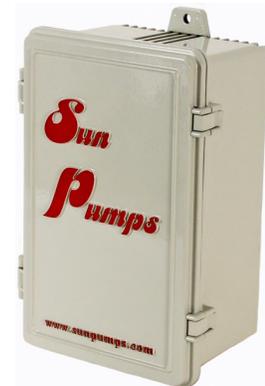

Solar Pond Fountains & Aeration Systems

SunPumps SPF series solar powered pond fountains and aerators are the ultimate in performance and reliability. There are a variety of choices from ½ to 3 HP pumps, flow rates from 20 GPM to 130 GPM and choice of five different spray patterns.

SunPumps SCS series brushless DC submersible pumps are the heart of the system. They incorporate a sensorless brushless DC motor with no electronics in the motor for ultimate reliability.

Sensorless Brushless DC Controller

The SPF series fountains pumps are multi-stage centrifugals constructed from corrosion resistant stainless steel. They are extremely resistant to mineral and algae deposits while providing outstanding strength and durability. The float assembly is a 24" foam filled, UV resistant, super tough thermal plastic. For added protection the pump is installed inside an 8" PVC well screen to filter the water from moss and debris that may be floating in the pond.

SunPumps SPF series fountains were designed for use as stand-alone decorative aeration systems for pond water circulation at golf courses, remote ponds, fish farms as well as many other aeration needs beyond commercial grid power. SunPumps high-quality manufacturing make the SPF series aerators the ultimate in solar powered fountains and aerators.
